#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

*Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-8,10-12,15-30,32-35,37-39,41-54,56-58,61,62 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mann (6052624).

Mann teaches a hand held programmer system, as shown in figure 1b, which can enable the storage of electrode configurations, as well as other parameters, see col. 7, lines 22+. The programming system can also be that which is depicted in figure 1A, including a display screen 16 and a joystick directional controller 12.

Figure 2 shows a map generator 50, and col. 9, line 35, which teach that the results of the mapping process are sorted in a memory 54. The mapping procedure outlined in the Mann patent is considered to be analogous to, and therefore obvious over, the calibration called for in the claims. One of ordinary skill in the art would understand that a certain amount of personalization of the device is necessary with the device of Mann, since each patient is different and requires different stimulation patterns and parameters. Col. 12, line 24 teaches the use of a selector button, which is located on the directional controller. Col. 12, lines 39+ teach selection software which is stored in memory. Col. 14, lines 33+ teach amplitude adjustment using slide switches on a display screen.

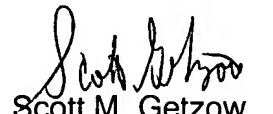

*Allowable Subject Matter*

3. Claims 9,13,14,31,36,40,55,59,60 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
